An Affordable
and easy to use
solution for managing
the school bus fleet.

Realtime Schoolbus Tracking System

About the App

Get School Bus is a location based tracking software which helps to know the location of school bus while in transit anytime, anywhere.

Get School Bus app brings some 'Smart' solutions to manage the school bus fleet. These solutions ensure the maximum benefits for the school, parents, students travelling in school bus and support staff.

Features the App

- Ensure student safety while pick up/drop
- Evaluate driving pattern and reduce accident risks
- Manage fleet with higher efficiency
- Manage emergency situations like breakdowns easily
- Confirm that your operators are driving safely and cautiously
- Reposition bus stop as necessary to increase efficiency
- Get real-time alerts on bus movement and student transit with pin-point accuracy
- Get instant notification on vehicle breakdown or emergencies in transit
- Stay stress-free throughout the day
- Get real - time alerts on bus movement and your child transit with pin-point accuracy
- Monitor speed and time duration of school bus at each stop

Components of Get School Bus App

1

The Core - GBS Tx App

Which replaced costly hardware

- GPS based Geocordination detection
- Activity log to monitor the Tx operation for admin
- Works with 2G, 3G or 4G with any service provider
- Very low data usage below 180 Mb per month (on standard condition)
- Speed monitoring, warning and admin alert
- 2 factor authentication for secure data transmission
- Option to configure the primary control attributes
- Full advantage of Android OS & mobile hardware
- Local storage of last data set for quick use
- Can download or update from Google play store

2

School admin web console & App

- Student data management
- Vehicle Management
- Tx configuration management
- Student - parent - Vehicle mapping & allocation
- Real time position tracking for individual vehicle
- Real time position of all vehicles in a single console
- Vehicle route management
- Bulk data importing from csv file feature
- School level settings and reports
- Notification of speed and real time various alerts

3

Get School Bus

- Very low data usage
- Option to configure settings
- Local storage of data for quick use
- Automatic updating of current location
- Real-time position of vehicle in Map view
- Speed Monitoring & over speed Warning
- Real time push notification of vehicle movement
- 2 factor authentication for secure data transmission
- Auto connect with student based on mobile number
- Custom Alert settings: location in the route of the vehicle
- Manage all children from single App (Irrespective of whether they are at different institution)

Benefits

Peace of Mind

Real-time GPS tracking for school buses can mean peace of mind for parents and ensure that children arrive at school and home safely every day.

Service

School could extent their service both in terms of safety for the children as well as being latest in service and convenience for the parents.

Safety of the child

Bus can be tracked to know when your child will reach school from home and vice versa. Also the exposure to inclement weather and other dangers the child can be exposed to during waiting for the bus is fairly reduced.

Route optimization

Managers can optimize bus route to reduce turnaround time, fuel consumption and expenses.
